REASONS FOR ALLOWANCE

1. The following is an examiner's statement of reasons for allowance: The primary reason for allowance of claims 1-7 is the inclusion of the limitations of a transfer ribbon that includes the relief layer and the reflection layer are disposed on the substrate in this order, and the relief layer comprises an ionizing radiation-cured resin. It is these limitations found in the claims, as they are claimed in the combination of that has not been found, taught or suggested by the prior art of record, which makes these claims allowable over the prior art.

The primary reason for allowance of claims 8-10 is the inclusion of a method steps for production of a transfer ribbon that includes forming a relief forming layer comprising an ionizing radiation-curable resin on the substrate, converting the relief forming layer to the relief layer by irradiating and curing the relief forming layer with an ionizing radiation. It is these steps found in the claims, as they are claimed in the combination of that has not been found, taught or suggested by the prior art of record, which makes these claims allowable over the prior art.

The primary reason for allowance of claims 11-13 is the inclusion of the limitations of an image expressing medium that includes each dot having an area in a range from 0.0001 to 0.09 mm.², and has a diffraction direction different from that of at least one of adjacent dots or two or more sections each of which has a diffraction direction different from each other. It is these limitations found in the claims, as they are claimed in the combination of that has not been found, taught or suggested by the prior art of record, which makes these claims allowable over the prior art.

Art Unit: 2861

The primary reason for allowance of claims 14-20 is the inclusion of a method steps for production of an image expressing medium that includes the relief layer having an ionizing radiation-cured resin, subjecting the support to thermal transfer with the use of the transfer ribbon by means of a thermal head to form plural dots of relief hologram and/or diffraction grating on the same surface where the color layer is disposed on so as that the each dot has a layered structure comprising a reflection layer and a relief layer, and has an area in a range from 0.0001 to 0.09 mm.sup.2, and has a diffraction direction different from that of at least one of adjacent dots or two or more sections each of which has a diffraction direction different from each other. It is these steps found in the claims, as they are claimed in the combination of that has not been found, taught or suggested by the prior art of record, which makes these claims allowable over the prior art.

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Araki et al. (US 6,801,236 B2) disclose a printing device and method having an intermediate transfer medium with a transfer layer in a prescribed pattern. Jojima et al. (US 6,655,287 B2) disclose a printing apparatus and printing method having an intermediate transfer ribbon. Wagner et al. (US 6,540,345 B1) disclose a transfer printing process from a receiver sheet having a thermally transferable film to a final substrate. Muchida et al. (US 6,317,149 B1) disclose a laminator transfer object producing apparatus and method.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably

accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
